

FOR IMMEDIATE RELEASE

ComplAi Inc. and Dynamical Tech Announce Strategic Partnership to Accelerate Cybersecurity Compliance for the DIB and the Public Sector Organizations

Automated, AI-native Cybersecurity GRC Compliance Platform with Professional Services Support, Now Available to Public Sector and Defense Industrial Base Organizations Seeking to Simplify Compliance for CMMC, NIST 800-171, NIST 800-53, FedRAMP, and Continuous ATO.

TAMPA, Fla., and SHREVEPORT-BOSSIER, La. – October 19, 2026 – [ComplAi Inc.](#), an innovator of SaaS software delivering automated, AI-native Governance, Risk, and Compliance (GRC) cybersecurity architecture, today announced a strategic partnership with [Dynamical Tech](#), a premier technology consultancy with a focus on professional services engagements tied to measurable outcomes and hands-on knowledge transfer.

Mutual Value & GRC Industry Impact

This strategic collaboration brings together complementary capabilities to help organizations gain greater visibility into their technology environments, strengthen security and compliance, and address the growing complexity of managing risk across their IT ecosystems. By uniting automated compliance technology with hands-on professional expertise, the partnership directly addresses critical market gaps in continuous governance and operational execution.

Together, ComplAi Inc. and Dynamical Tech deliver targeted solutions for Defense Industrial Base organizations of all sizes, and Public Sector Agencies, to simplify compliance for CMMC, NIST 800-171, NIST 800-53, and Continuous ATO. The integrated approach solves key customer pain points by translating raw compliance data into defensible, actionable risk management decisions which eliminates deployment complexity, and accelerates audit readiness.

“Dynamical Tech is excited to join forces with ComplAi Inc. Our team’s extensive expertise in cybersecurity and IT operations perfectly complements ComplAi Inc.’s unique platform. Together, we are eliminating deployment complexity so organizations can realize the full return on their software investment from day one. We look forward to collaborating with ComplAi to enable customers with dedicated customized support, specialized implementation and integration services, streamlining deployment and accelerating time-to-value. At Dynamical Tech, we believe the strongest technology partnerships are those that translate innovation into meaningful business outcomes for our customers,” added Dynamical’s Chief Strategy Officer. “By combining our expertise and working closely together, we can help customers break down silos, simplify operations, and move from identifying challenges to implementing practical, measurable solutions. Ultimately, this partnership is about empowering customers to operate with greater confidence, reduce risk, and accelerate their business objectives.”

"By partnering with Dynamical Tech, we are bringing the next generation of intelligent compliance to our customers," said Nick Summers, CEO and Co-founder at ComplAi. "Agencies and prime contractors increasingly expect vendors to show compliance with cybersecurity frameworks. Vendors are seeking a comprehensive GRC platform, however the GRC solution market is bifurcated: On one side are the legacy GRC platforms that basically store compliance documents, and on the other is our automated platform that is purpose-built to capture compliance decisions — the full chain of evidence, reasoning and authorization behind every determination. ComplAi’s Javelin GRC is the only platform purpose-built on a context-graph AI architecture with native data protection and asset intelligence as foundational layers. We also govern compliance continuously, at the most atomic level of every framework we support, with full decision lineage that makes every future determination faster and more defensible. Other GRCs report on compliance. Javelin GRC governs it."

Where to Buy

The Javelin GRC and DSPM platforms, including Dynamical Tech Professional services, are available directly through ComplAi and Dynamical, via Carahsoft’s Cybersecurity Solutions Portfolio, or as a customized private offer on the [AWS Marketplace](#).

About ComplAi Inc.

Headquartered in Tampa, Florida, ComplAi Inc. builds AI that governs compliance, rather than merely reporting on it. We built the first truly AI-native compliance model. It reasons over every control objective, cites the evidence behind each determination, and keeps your environment audit-ready every day. It runs entirely inside your own cloud boundary, so your data never leaves your control. Our Javelin GRC platform is a next-generation governance, risk and compliance system for Federal Agencies, defense companies, and regulated industries that run critical infrastructure. Our Javelin DSPM finds and classifies sensitive data wherever it lives. Its AI assistant helps your team propose and explain classification rules, with human approval, so every classification stays deterministic and explainable. Both platforms integrate with leading cyber asset management platforms giving Javelin an always-current view of every device, user and workload, so determinations rest on ground truth instead of spreadsheets. ComplAi is CMMC Level 2 certified. Other GRCs report on compliance. ComplAi governs it. Learn more at www.complai.us.

About Dynamical Tech

Dynamical Tech is a Shreveport-Bossier, Louisiana-based cybersecurity and IT advisory firm built on a simple idea: complexity understood, solutions simplified. Its team of recognized experts in cybersecurity, enterprise networking, data centers, and IT operations helps organizations turn technical complexity into business advantage. Dynamical delivers strategic advisory services, cybersecurity managed services, small business security programs, and optimization services that improve financial performance, operational excellence, and customer success. Its recommendations are based on what each client needs, not on vendor relationships. Dynamical also maintains a curated ecosystem of best-of-breed, AI-first security partners and integrates them into a unified defense that fits each client's environment. Every engagement is tied to measurable outcomes and includes hands-on knowledge transfer, so client teams can maintain and evolve what Dynamical helps them build. Learn more at www.dynamical.tech.
